

# Enlarged Blank Number Line

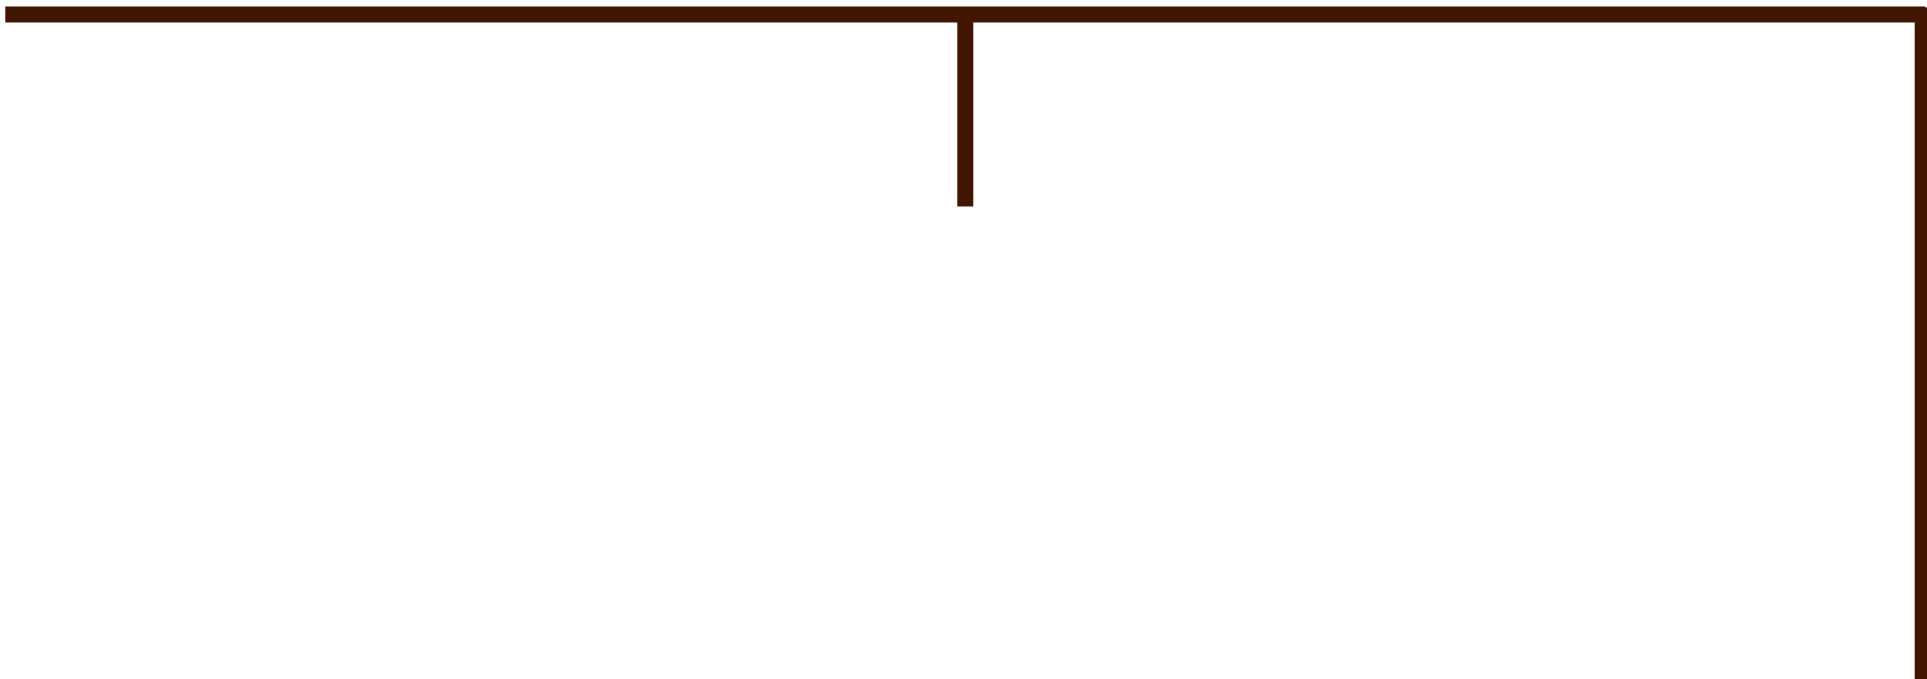

---

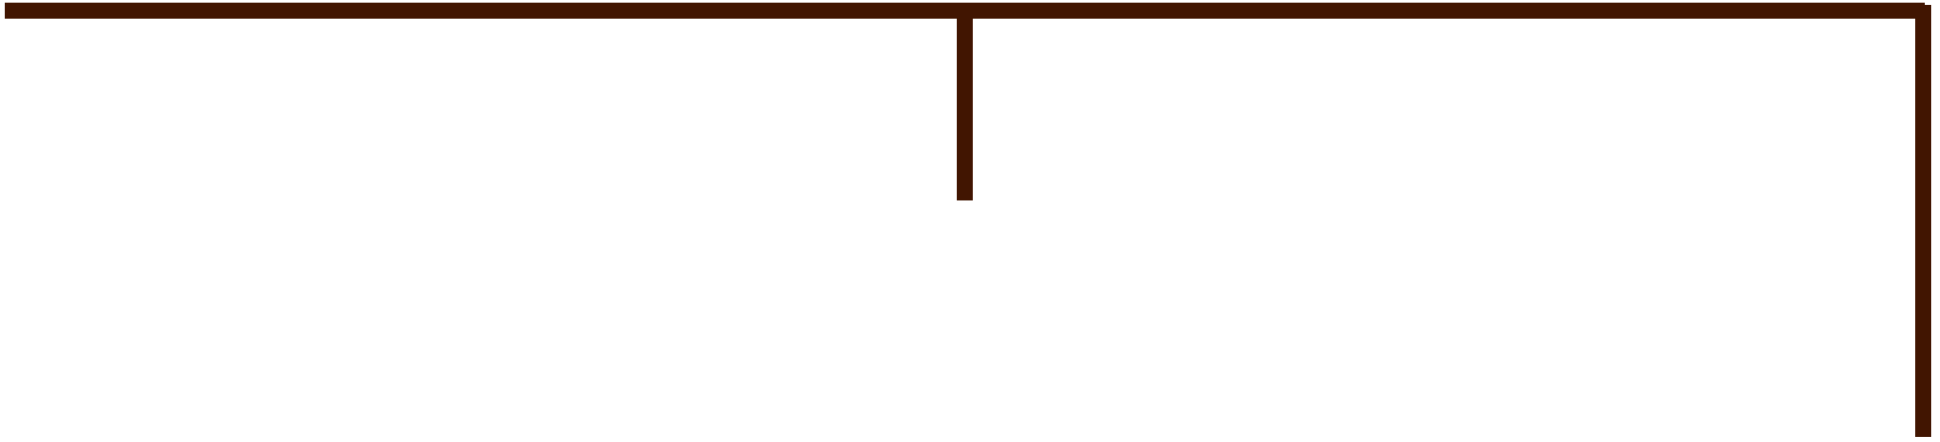

This enlarged, blank number line is to be used with the module entitled *Introduction to Fractions & Measure Spaces and Materials to Successfully Complete Construction Projects*. To use this number line:

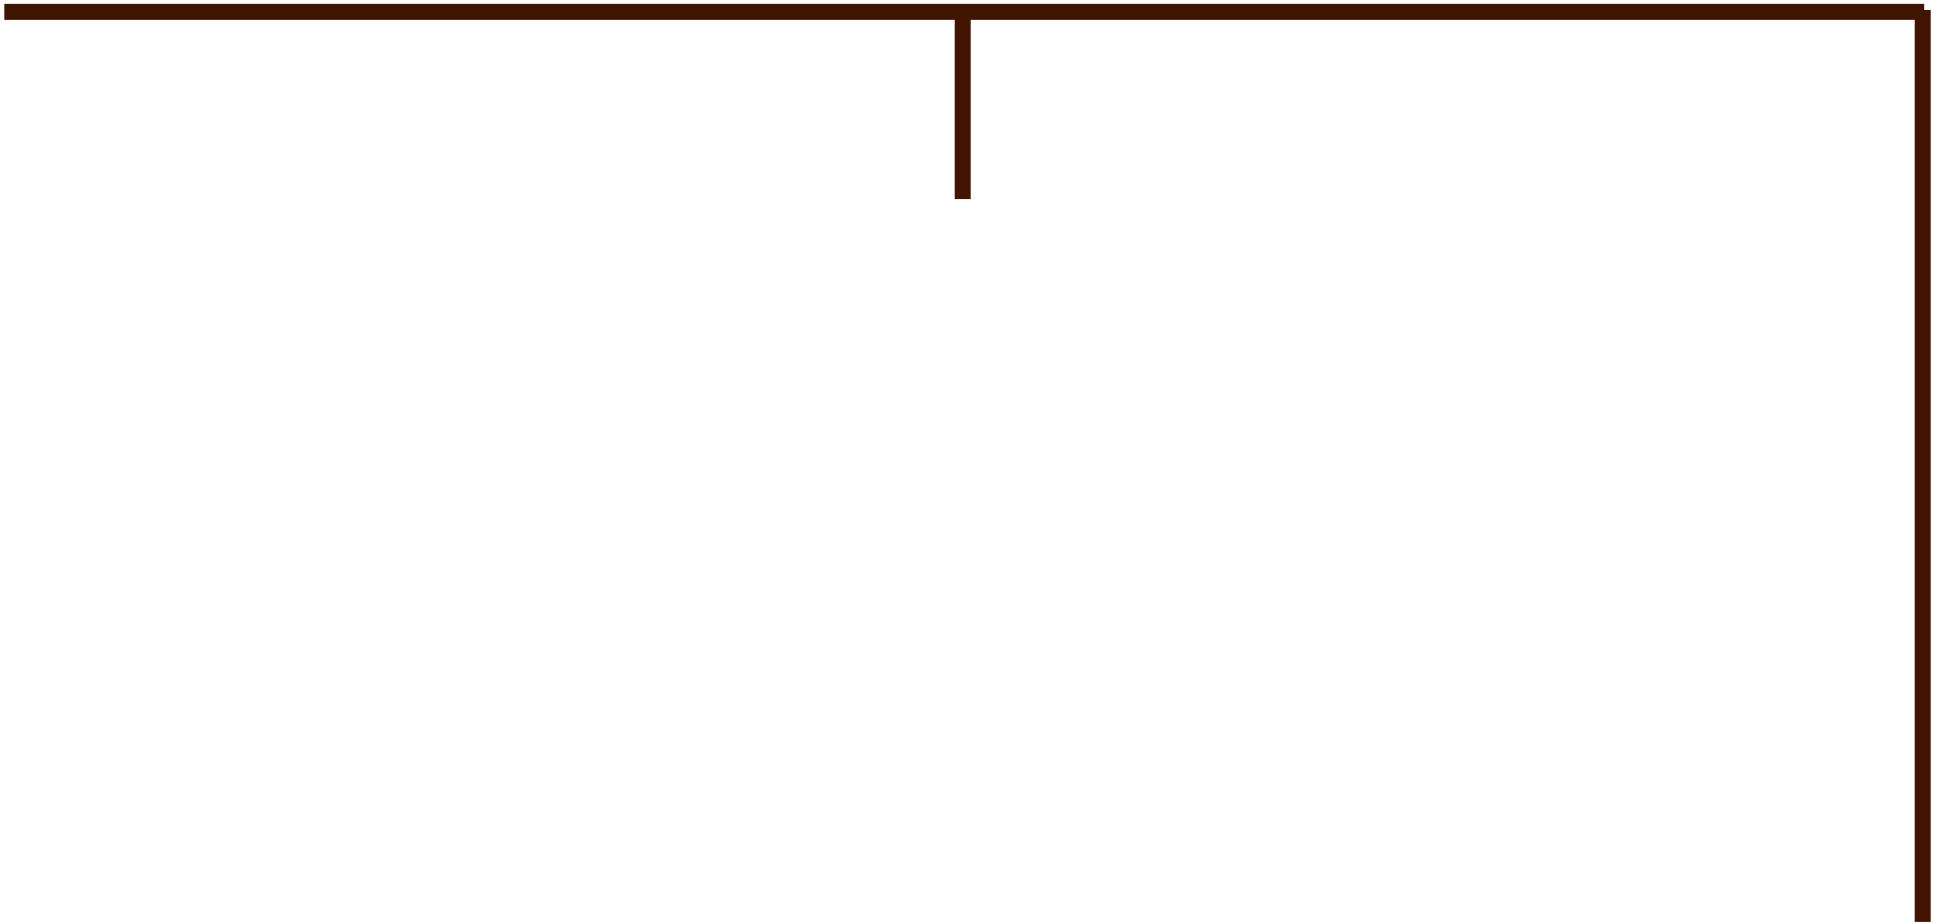

1. Print pages 1 – 8 (i.e. all pages except for this *Instructions* page and page 9, which is the master number line) on separate sheets of paper.
2. Trim the left and right margins of each page, being careful to leave all of the lines on each page.
3. If possible, laminate the pages or put them in plastic protectors in order to preserve them.
4. Tape the pages to a wall so they will be visible and accessible to all students and instructors. Students will be taping index cards on or just below the number line.
5. Line up each page so that it's right edge aligns and connects with the left edge of the next page. For example, line up page 3 so it's right edge aligns and connects with the left edge of page 4.
6. When all eight pages are aligned, they should form a blank number line from 0 – 1 with marks for sixteenths, eighths, fourths, and one-half.
