

Instructor's Manual

Module 4: Multiplying Fractions, Simplifying Fractions, and Converting Between Improper Fractions and Mixed Numbers

What Students Should Gain from this Module

At the end of this module, student should be able to:

- Multiply fractions
- Simplify fractions
- Convert between improper fractions and mixed numbers

Recommended Timing for this Module 6 hours and 20 minutes

Required Equipment and Materials

- An LCD projector and a Windows computer or laptop. The computer should have high speed internet access, a recent version of PowerPoint, an updated Internet browser, and speakers
- Cords for connecting the LCD projector to the computer
- A wireless presenter which allows you to move around the room while controlling the PowerPoint presentation
- A screen visible to all in the room
- *Multiplying Fractions* PowerPoint file

- A copy of the *Multiplying Slides* handout for each student and instructor
- A copy of the *Multiplying Fractions Practice* handout for each student and instructor

Optional Materials

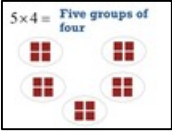

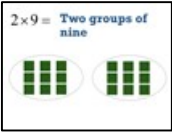

At Math-Aids.com <http://www.math-aids.com> you can create and print a wide variety of practice problem sets (and answer keys) for students who want or need additional practice. You can also create problem sets that offer a higher degree of challenge for students who want an additional challenge. Be sure to confirm that your use of the Math-Aids resources complies with its usage guidelines.

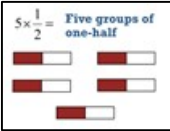

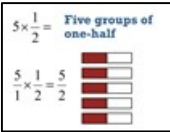

Note to the Instructor

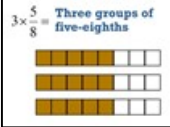

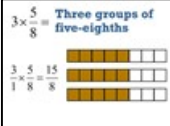

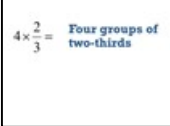

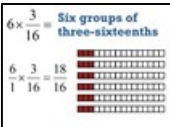

Some of the slides for this module require you to “Click” or press enter on the keyboard to reveal additional information on the slide. Especially where there is a lot of information on a slide, this will help you guide students’ attention to the information you are addressing. In other cases, it engages students by giving them a chance to think through their own answer or strategy for solving a problem before the answer is revealed on the slide.

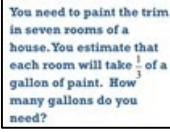

Time	Activity	Materials	What to Do
3	Introduction	<p>How can you multiply two positive numbers and get a result that is smaller than either of the two numbers you are multiplying?</p>	<p>Ask how they could multiply two positive numbers and get a result that is smaller than either of the two numbers they are multiplying.</p> <p>Say that the answer is in this module.</p>
35	Multiplying Fractions with Whole Numbers	<p>Handout: <i>Multiplying Fractions Slides</i></p>    	<p>Pass out the slide handouts.</p> <p>Review the objective.</p> <p>Say that they will often have to multiply fractions, like when they are calculating how much material they will need.</p> <p>Or when they need to calculate the height of something, like a staircase.</p> <p>Or when you are trying to cost out a job.</p>

Time	Activity	Materials	What to Do
		<p>Think of multiplication like this:</p> <p>5×2 Five groups of two</p> <p>3×9 Three groups of nine</p> <p>3×14 Three groups of fourteen</p> <p>12×7 Twelve groups of seven</p> <p>$5 \times 4 =$ Five groups of four</p>  <p>$2 \times 9 =$ Two groups of nine</p> 	<p>Say that when they see a multiplication problem, it can be helpful to think of it as “ ___ groups of ___.”</p> <p>Ask how they would say 5×4.</p> <p>Ask if multiplying 5×4 would produce a result that is greater or less than 5.</p> <p>Say that visualizing problems like these can be helpful. CLICK</p> <p>Point out the five groups of four.</p> <p>Ask what $5 \times 4 =$.</p> <p>Point out the 20 objects.</p> <p>Ask how they would say 2×9.</p> <p>Ask if multiplying 2×9 would produce a result that is greater or less than 2. CLICK</p> <p>Point out the two groups of nine.</p> <p>Ask what $2 \times 9 =$.</p> <p>Point out the 18 objects.</p> <p>Say that thinking about multiplication like this will help them understand multiplication of fractions.</p>

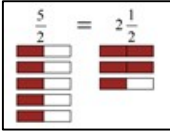

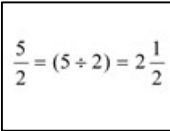

Time	Activity	Materials	What to Do
		  	<p>Ask how they would say $5 \times \frac{1}{2}$ (five groups of $\frac{1}{2}$). CLICK</p> <p>Ask how many halves there are.</p> <p>Point out the five, one-halves.</p> <p>Ask if multiplying 5 by $\frac{1}{2}$ will produce a result that is greater or less than 5.</p> <p>Ask why it is less</p> <p>Point out the difference between 5 and $\frac{5}{2}$ on the slide</p> <p>NOTE – WILL WORK ON SIMPLIFYING FRACTIONS LATER</p> <p>Say that, when multiplying fractions, you can just multiply the two top numbers and the two bottom numbers.</p> <p>Ask what the bottom number would be for 5. CLICK</p> <p>Point out the 1.</p> <p>Say to remember that any whole number can be written as itself over 1.</p>

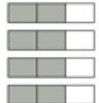

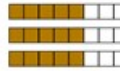

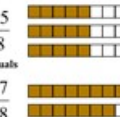

Time	Activity	Materials	What to Do
		 <p>$3 \times \frac{5}{8} =$ Three groups of five-eighths</p>  <p>$3 \times \frac{5}{8} =$ Three groups of five-eighths</p> <p>$\frac{3}{1} \times \frac{5}{8} = \frac{15}{8}$</p>  <p>$4 \times \frac{2}{3} =$ Four groups of two-thirds</p>  <p>$6 \times \frac{3}{16} =$ Six groups of three-sixteenths</p> <p>$\frac{6}{1} \times \frac{3}{16} = \frac{18}{16}$</p>	<p>Ask how they would say $3 \times 5/8$.</p> <p>Ask if multiplying 3 by $5/8$ will produce a result that is greater or less than 3.</p> <p>Ask why it will be less. CLICK</p> <p>Ask how many eighths there are.</p> <p>Say that three groups of $5/8$ths = $15/8$ths.</p> <p>Point out the fifteen eighths.</p> <p>Ask students how they would say $4 \times 2/3$. CLICK</p> <p>Invite a student to come to the board to draw what 4 groups of $2/3$ would look like, write it out as numbers, (e.g. $4 \times 2/3$), and find the answer.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Ask how they would say $6 \times 3/16$. CLICK</p> <p>Ask what the bottom number would be for 6. CLICK</p> <p>Point out the 1.</p>

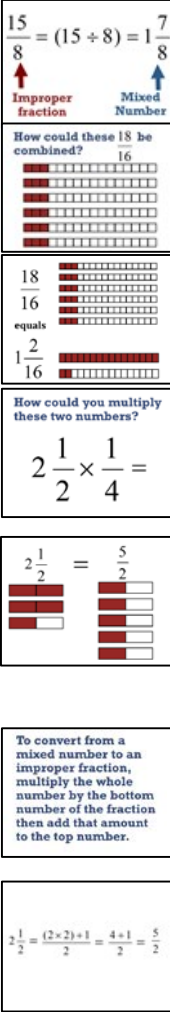

Time	Activity	Materials	What to Do
		 	<p>Ask how they would say this using the “groups” phrase (six groups of $1/2$ miles).</p> <p>Invite a student to come to the board to draw what 6 groups of $1/2$ would look like, write it out as numbers, and find the answer.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Point out the importance of labeling their answer (e.g. miles).</p> <p>Ask how they would say this using the “groups” phrase (7 groups of $1/3$ gallons).</p> <p>Ask if they will need more or less than seven gallons of paint, and why.</p> <p>Invite a student to come to the board to draw the 7 groups of $1/3$, write it out as numbers, and find the answer.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Be sure they label their answer (e.g. gallons).</p> <p>Ask students what questions they have about multiplying fractions with whole numbers.</p>

Time	Activity	Materials	What to Do
60	Multiplying Whole Numbers and Fractions Practice	Handout: <i>Multiplying Fractions Practice</i>	<p>Have students form groups of 3 or 4.</p> <p>Say to remember that, in class or on the job, they will need to work as a team, which means supporting and encouraging one another. It is not enough for the group to get the right answers. Instead, they should take responsibility for helping one another until each member of the group has mastered the process and feels confident in her ability to solve the problems on her own.</p> <p>Say that they should remember the goal(s) they set for themselves, what they pledged to do to “Commit to Grit” in the <i>Being Gritty</i> handout at the beginning of the course, and the importance of maintaining a growth mindset if they have difficulty or get frustrated.</p> <p>Say that you can provide additional problem sets for students who want additional practice or additional challenge. See the information about Math-Aids under Optional Materials above.</p> <p>Pass out the <i>Multiplying Fractions Practice</i> handout and have students work through problems 1 – 10. As they do, check in with groups to answer questions and ensure that no individual(s) in the group is being left behind.</p> <p>Review the answers, answer questions, and review content students are struggling with.</p>

Time	Activity	Materials	What to Do
10	<p>Multiplying Two Fractions</p>	<p>Imagine that, after a party, there is $\frac{1}{2}$ of a cake left. Your roommate then eats $\frac{2}{3}$ of the leftover cake. How much of the entire cake did your roommate eat?</p> <p>If it takes $\frac{1}{4}$ of a gallon of paint to cover the trim in one room, how much paint do you need to paint $\frac{3}{4}$ of the trim in one room?</p> <p>If it takes $\frac{1}{3}$ of a gallon of paint to cover the trim in one room, how much paint do you need to paint $\frac{3}{4}$ of the trim in one room?</p> <p>$\frac{3}{4} \times \frac{1}{3} = \frac{3}{12}$ of a gallon</p> <p>If $\frac{2}{5}$ of your work crew are carpenters and $\frac{3}{4}$ of the carpenters are female, how many female carpenters are on your work crew?</p> <p>$\frac{2}{5} \times \frac{3}{4} = \frac{10}{40}$ are female carpenters</p>	<p>Invite a student to come to the board to write this out in numbers and find the answer.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Point out the need to label their answer (e.g. how much of the cake).</p> <p>Ask whether they will need more than 1/3 of a gallon or less than 1/3, and why.</p> <p>Have students write out the problem and their answer on their handout.</p> <p>Have students correct their answer if necessary.</p> <p>Ask whether more than 5/8 are female carpenters or less than 5/8 are female carpenters, and why.</p> <p>Have students write out the problem and their answer on their handout.</p> <p>Have students correct their answer if necessary.</p> <p>Ask students what questions they have about multiplying two fractions.</p>

Time	Activity	Materials	What to Do
60	Multiplying Two Fractions Practice	Handout: <i>Multiplying Fractions Practice</i>	<p>Have students work through problems 11 – 19 in their groups. As they do, check in with groups to answer questions and ensure that no individual(s) in the group is being left behind.</p> <p>Review the answers, answer questions, and review content students are struggling with.</p>
45	Converting Between Improper Fractions and Mixed Numbers	<p>At the end of this part of the module, you should be able to:</p>   	<p>Review the objective.</p> <p>Ask how these five halves could be combined. CLICK</p> <p>Show how the halves were combined to make two wholes.</p> <p>Ask how they would write the newly-combined visual as numbers. CLICK</p> <p>Say to remember that one way to think about a fraction is as division of the top number by the bottom number.</p>

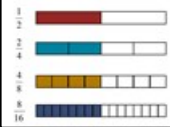

Time	Activity	Materials	What to Do
		<div data-bbox="541 310 709 435"> $\frac{5}{2} = (5 \div 2) = 2 \frac{1}{2}$ <p>↑ Improper fraction ↑ Mixed Number</p> </div> <div data-bbox="541 548 709 673"> $\frac{5}{5} = (5 \div 5) = 1$ <p>↑ Improper fraction</p> </div> <div data-bbox="541 748 709 873"> $\frac{8}{3}$  </div> <div data-bbox="541 964 709 1089"> $\frac{8}{3} = (8 \div 3) = 2 \frac{2}{3}$ <p>↑ Improper fraction ↑ Mixed Number</p> </div> <div data-bbox="541 1117 709 1242"> <p>How could these 15 be combined? 8</p>  </div> <div data-bbox="541 1252 709 1377"> $\frac{15}{8} = 1 \frac{7}{8}$ <p>equals</p>  </div>	<p>Say that if the top number is larger or equal to the bottom number it is an “improper fraction.” CLICK</p> <p>Say that if the number is a whole number + a proper fraction it is called a “mixed number.” CLICK</p> <p>Say to remember that any number divided by itself = 1</p> <p>Invite a student to the board to draw how these 8/3rds could be combined.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Show how 8/3 converts to 2 2/3</p> <p>Have students write the shapes and answer on their handout.</p> <p>Have students correct their answer (if necessary) on their handout.</p>

Time	Activity	Materials	What to Do
		 <p> $\frac{15}{8} = (15 \div 8) = 1 \frac{7}{8}$ <small>↑ Improper fraction ↓ Mixed Number</small> </p> <p>How could these 18 be combined? $\frac{18}{16}$</p> <p> $\frac{18}{16}$ <small>equals</small> $1 \frac{2}{16}$ </p> <p>How could you multiply these two numbers? $2 \frac{1}{2} \times \frac{1}{4} =$</p> <p> $2 \frac{1}{2} = \frac{5}{2}$ </p> <p>To convert from a mixed number to an improper fraction, multiply the whole number by the bottom number of the fraction then add that amount to the top number.</p> <p> $2 \frac{1}{2} = \frac{(2 \times 2) + 1}{2} = \frac{4 + 1}{2} = \frac{5}{2}$ </p>	<p>Show how $15/8$ converts to $1 \frac{7}{8}$.</p> <p>Have students write the shapes and answer on their handout.</p> <p>Have students correct their answer (if necessary) on their handout.</p> <p>Ask how they could multiply these two numbers.</p> <p>Say to remember that $2 \frac{1}{2}$ is the same as $5/2$. CLICK</p> <p>Say that, to multiply mixed numbers, you need to first convert the mixed number back to an improper fraction.</p> <p>Show how the mixed number $2 \frac{1}{2}$ was changed to CLICK $(4+1)/2$ and how that was changed to CLICK $5/2$.</p>

Time	Activity	Materials	What to Do
		<div data-bbox="541 272 709 397" style="border: 1px solid black; padding: 5px;"> $2\frac{1}{2} \times \frac{1}{4} =$ <p>Is the same as</p> $\frac{5}{2} \times \frac{1}{4} =$ </div> <div data-bbox="541 402 709 527" style="border: 1px solid black; padding: 5px;"> $2\frac{1}{2} \times \frac{1}{4} = \frac{5}{8}$ <p>Is the same as</p> $\frac{5}{2} \times \frac{1}{4} = \frac{5}{8}$ </div> <div data-bbox="541 565 709 690" style="border: 1px solid black; padding: 5px;"> <p>What is the result of multiplying these two numbers?</p> $3\frac{3}{8} \times \frac{2}{3} =$ </div> <div data-bbox="541 1019 709 1144" style="border: 1px solid black; padding: 5px;"> <p>What is the result of multiplying these two numbers?</p> $\frac{1}{2} \times 4\frac{3}{16} =$ </div>	<p>Point out that $2\frac{1}{2}$ is the same as $\frac{5}{2}$.</p> <p>Show how $\frac{5}{2} \times \frac{1}{4}$ equals $\frac{5}{8}$.</p> <p>Say to remember that $3\frac{3}{8}$ is a single number.</p> <p>Invite a student to come to the board to demonstrate how to solve this.</p> <p>Have the other students write their own answer on their handout.</p> <p>Review and correct the answer as necessary.</p> <p>Ask how the answer (an improper fraction) would be written as a mixed number.</p> <p>Review and correct the answer as necessary.</p> <p>Have students write the answer on their handout.</p>

Time	Activity	Materials	What to Do
		<div data-bbox="541 305 709 427" style="border: 1px solid black; padding: 5px;"> $\frac{1}{2} \times 4 \frac{3}{16} = \frac{67}{32} = 2 \frac{3}{32}$ <p style="text-align: center; color: red; font-size: small;">Is the same as</p> $\frac{1}{2} \times \frac{67}{16} = \frac{67}{32} = 2 \frac{3}{32}$ </div> <div data-bbox="541 638 709 768" style="border: 1px solid black; padding: 5px;"> <p style="font-size: x-small;">What is the result of multiplying these two numbers?</p> $\frac{2}{3} \times 5 \frac{3}{4} =$ </div> <div data-bbox="541 812 709 933" style="border: 1px solid black; padding: 5px;"> $2 \frac{2}{3} \times 5 \frac{3}{4} = \frac{184}{12} = 15 \frac{4}{12}$ <p style="text-align: center; font-size: x-small;">Is the same as</p> $\frac{8}{3} \times \frac{23}{4} = \frac{184}{12} = 15 \frac{4}{12}$ </div> <div data-bbox="541 1209 709 1339" style="border: 1px solid black; padding: 5px;"> <p style="font-size: x-small;">If it takes $1 \frac{1}{2}$ gallons of patching compound to patch the average ceiling in this building, how many gallons will be needed to patch six average ceilings?</p>  </div>	<p>Show how to get from $4 \frac{3}{16}$ to $\frac{67}{16}$. CLICK</p> <p>Show how $\frac{1}{2} \times \frac{67}{16} = \frac{67}{32}$. CLICK</p> <p>Show how $\frac{67}{32} = 2 \frac{3}{32}$. CLICK</p> <p>Point out that $\frac{1}{2} \times 4 \frac{3}{16} = 2 \frac{3}{32}$</p> <p>Have students correct their answer (if necessary) on their handout.</p> <p>Have students write the answer on their handout.</p> <p>Show how to get from $2 \frac{2}{3}$ to $\frac{8}{3}$. CLICK</p> <p>Show how to get from $5 \frac{3}{4}$ to $\frac{23}{4}$. CLICK</p> <p>Show how $\frac{8}{3} \times \frac{23}{4} = \frac{184}{12}$. CLICK</p> <p>Show how $\frac{184}{12} = 15 \frac{4}{12}$. CLICK</p> <p>Point out that $2 \frac{2}{3} \times 5 \frac{3}{4} = 15 \frac{4}{12}$</p> <p>Have students correct their answer (if necessary) on their handout.</p> <p>Have students write the answer on their handout.</p>

Time	Activity	Materials	What to Do
		$6 \times 10 \frac{1}{2} = \frac{126}{2} = 63$ <p>Is the same as</p> $\frac{6}{1} \times \frac{21}{2} = \frac{126}{2} = \frac{63}{1}$	<p>Say to remember that 6 is the same as 6/1.</p> <p>Show how to get from 10 1/2 to 21/2. CLICK</p> <p>Show how 6/1 x 21/2 = 126/2. CLICK</p> <p>Show how 126/2 = 63. CLICK</p> <p>Point out that 6 x 10 1/2 = 63.</p> <p>Have students correct their answer (if necessary) on their handout.</p> <p>Ask students what questions they have about converting between improper fractions and mixed numbers.</p> <p>Before moving on to <i>Simplifying Fractions</i> you might choose to have students practice converting between improper fractions and mixed numbers using <i>Multiplying Fractions Practice</i> problems 20 - 43.</p>
20	Simplifying Fractions	 <p>You can write any number many different ways.</p> $\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{8}{16}$	<p>Review the objective.</p> <p>Say to remember that any number can be written in many different ways.</p> <p>Point out that these are all the same number.</p>

Time	Activity	Materials	What to Do																	
		 <p>All of these numbers are the same.</p> <table border="1" data-bbox="541 446 709 568"> <tr> <td>3</td> <td>18</td> <td>60</td> <td>90</td> </tr> <tr> <td>4</td> <td>24</td> <td>80</td> <td>120</td> </tr> </table> <p>Which version would you rather work with?</p> <p>To simplify a fraction, find the largest number you can divide the top and bottom number by to get a whole number.</p> <table border="1" data-bbox="541 714 709 836"> <tr> <td>6</td> <td>6</td> </tr> <tr> <td>12</td> <td>12</td> </tr> </table> <p>To simplify a fraction, find the largest number you can divide the top and bottom number by to get a whole number.</p> <table border="1" data-bbox="541 974 709 1096"> <tr> <td>6</td> <td>Can be divided by 1, 2, 3, 6</td> </tr> <tr> <td>12</td> <td>Can be divided by 1, 2, 3, 4, 6, 12</td> </tr> </table> <p>To simplify a fraction, find the largest number you can divide the top and bottom number by to get a whole number.</p> <table border="1" data-bbox="541 1177 709 1234"> <tr> <td>$\frac{6}{12} \div 6 = \frac{1}{2}$</td> </tr> </table>	3	18	60	90	4	24	80	120	6	6	12	12	6	Can be divided by 1, 2, 3, 6	12	Can be divided by 1, 2, 3, 4, 6, 12	$\frac{6}{12} \div 6 = \frac{1}{2}$	<p>Point out how all these ways of writing the fraction are really the same number (same amount).</p> <p>Show how each is the same.</p> <p>Ask, if they were measuring or calculating something, which version of this number they would want to work with.</p> <p>Ask which is the simplest.</p> <p>Say that to simplify a fraction you need to divide the top and bottom by the same number.</p> <p>Note – do not refer to simplifying fractions as “reducing” them. “Reducing” can give students the impression that the simplified fraction is smaller than the original.</p> <p>Point out that 6 is the largest number that can be divided into both the top and bottom number to get a whole number. CLICK</p> <p>Show how dividing both the top and bottom by 6 will simplify the fraction to 1/2.</p>
3	18	60	90																	
4	24	80	120																	
6	6																			
12	12																			
6	Can be divided by 1, 2, 3, 6																			
12	Can be divided by 1, 2, 3, 4, 6, 12																			
$\frac{6}{12} \div 6 = \frac{1}{2}$																				

Time	Activity	Materials	What to Do
		<p data-bbox="541 280 711 342">It is OK if you do not find the largest common number the first time.</p> $\frac{6}{12} \div 3 = \frac{2}{4} \div 2 = \frac{1}{2}$  <p data-bbox="541 477 711 508">Not all fractions can be simplified.</p> $\frac{9}{16}$  $\frac{12}{32}$  $\frac{10}{64}$ $\frac{10}{64} \div 2 = \frac{5}{32}$ $\frac{64}{64} \div 2 = 32$ $\frac{42}{72}$ 	<p data-bbox="737 305 1808 378">Say that it is OK if they don't find the largest common number the first time, they might just need to simplify it more than once.</p> <p data-bbox="737 412 1751 448">Show how the original fraction needed to be divided twice to simplify it.</p> <p data-bbox="737 509 1297 545">Point out that this cannot be simplified.</p> <p data-bbox="737 643 1787 678">Invite a student to come to the board to demonstrate how to simplify this.</p> <p data-bbox="737 712 1675 748">Have the other students write their own answer on their handout.</p> <p data-bbox="737 782 1373 818">Review and correct the answer as necessary.</p> <p data-bbox="737 875 1801 911">Have students write the simplified version of this fraction on their handout.</p> <p data-bbox="737 1008 1272 1044">Show how 10/64 is simplified to 5/32.</p> <p data-bbox="737 1078 1436 1114">Have students correct their answers if necessary.</p> <p data-bbox="737 1170 1801 1206">Have students write the simplified version of this fraction on their handout.</p>

Time	Activity	Materials	What to Do
		<div data-bbox="541 293 709 418" style="border: 1px solid black; padding: 5px;"> $\frac{42}{72} \div 6 = \frac{7}{12}$ </div> <div data-bbox="541 456 709 581" style="border: 1px solid black; padding: 5px;"> <p style="font-size: small;">If a correct answer is not in the simplest form it is still correct!</p> $\frac{3}{4} \times \frac{2}{3} = \frac{6}{12} = \frac{1}{2}$ </div>	<p>Have students correct their answers if necessary.</p> <p>Point out that 6/12 is correct CLICK</p> <p>But 1/2 is easier to work with.</p> <p>Ask students what questions they have about simplifying fractions.</p>
15	<p>Converting Between Improper Fractions and Mixed Numbers, and Simplifying Fractions Practice</p>	<p>Handout: <i>Multiplying Fractions Practice</i></p>	<p>Have students form groups of 3 or 4.</p> <p>Say to remember that, in class or on the job, they will need to work as a team, which means supporting and encouraging one another. It is not enough for the group to get the right answers. Instead, they should take responsibility for helping one another until each member of the group has mastered the process and feels confident in her ability to solve the problems on her own.</p> <p>Say that they should remember the goal(s) they set for themselves, what they pledged to do to “Commit to Grit” in the <i>Being Gritty</i> handout at the beginning of the course, and the importance of maintaining a growth mindset if they have difficulty or get frustrated.</p> <p>Say that you can provide additional problem sets for students who want additional practice or additional challenge. See the information about Math-Aids under Optional Materials above.</p>

Time	Activity	Materials	What to Do
			<p>Pass out the <i>Multiplying Fractions Practice</i> handout and have students work through problems 44 – 48. As they do, check in with groups to answer questions and ensure that no individual(s) in the group is being left behind.</p> <p>Review the answers, answer questions, and review content students are struggling with.</p>
10	Planning to Apply their Learning		<p>Have students reflect on the learning from this module and note in their journal what they have learned that will be useful to them on the job, what they want to remember, tips, etc., and when they have demonstrated grit or a growth mindset.</p>
